

SYSTEM AND METHOD FOR DYNAMICALLY UPDATING A SITE MAP AND  
TABLE OF CONTENTS FOR SITE CONTENT CHANGES

Abstract of the Disclosure

5           A web site is broken up into main topical content  
areas. Each area shows a list of content items that the  
user can link to, displayed using views. A site map and  
table of contents read these views to determine what the  
user should see. The site map is a high level category  
10 oriented view, and the table of contents is a more detailed  
view, getting lower level to content items. Each time the  
users requests the site map or table of contents, an agent  
is executed to "lookup" into the content views, giving the  
user the very latest content.
